IHSG Stock Performance Report (2026)

> **Executive Summary: The Indonesian Composite Stock Price Index (IHSG / JCI) faced significant bearish pressure in 2026, declining by over 42% from its January highs due to severe capital outflows following structural standalone market reclassification proposals.**

📊 Key Performance Metrics

Metric	Value / Details
2026 Peak Value	9,174.47 (January 19, 2026)
Current Value (Nov 5, 2026)	5,030.26 (Staged a minor 2.25% tactical rebound)
Overall 2026 YTD Trend	**Bearish (-42.3% from peak)**
Worst Performing Month	October 2026 (-16.70% crash in a single month)

⚠️ Critical Market Disruptions & Volatility

- **Regulatory Shockwaves:** Market panic initiated heavily following the MSCI proposal to potentially declassify Indonesia from an Emerging Market designation down to a Standalone Market status.
- **Structural Safety Halts:** Extreme downward momentum forced the Indonesia Stock Exchange to activate emergency automatic circuit breakers and structural trading halts on consecutive days (January 28 and January 29, 2026) as daily losses breached the 8% statutory threshold.
- **Current Outlook:** While the index finds temporary consolidation near the 5,000 baseline support index level, macro liquidity constraints keep the broader market landscape volatile heading into the final stretch of Q4 2026.
